Prices represent the upcharge to motorize Pristine Roller Shades with Automate Radio Communication (ARC).

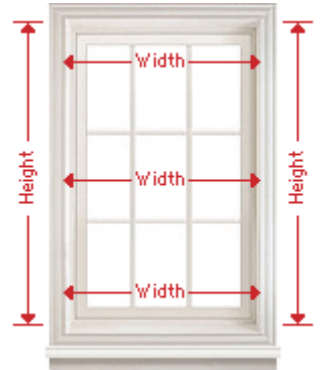

1. Choose Your Mounting Style

Decide if roller shade will sit within the window casing or cover from the outside.

- **Inside Mount (IM/IB):** The shade is installed inside the window frame or a recessed opening. This provides a sleek, custom look.
- **Outside Mount (OM/OB):** The shade is mounted on the wall, ceiling, or window molding. This is ideal for masking unattractive trim or providing better light blockage.

2. Measuring for Inside Mount

- **Width:** Measure the top, middle, and bottom of the window opening. Record the narrowest width to the nearest 1/8". This ensures the shade operates without rubbing against the frame.
- **Length:** Measure the left, center and right vertical distances. Record the longest length to the nearest 1/8".
- **Important:** Provide exact window dimensions. The factory will calculate the necessary deductions for the tube and fabric. Do not make your own adjustments.

IB Measuring

3. Measuring for Outside Mount

- **Width:** Measure the window opening (or the outer edges of the trim). Add extra inches to your total for maximum privacy and to minimize light gaps. Round to the nearest 1/8".
- **Length:** Measure the height of the area you wish to cover. Ensure you add enough height to account for the mounting brackets above the window and overlap at the bottom. Round to the nearest 1/8".
- **Protrusions:** If you have a protruding window sill, measure down to the sill surface.

OB Measuring

4. Final Confirmation

- **Order Format:** Always list Width first, then Length. (Width x Length)
- **Fabric Width vs. Bracket Width:** Please note that the actual fabric will be narrower than the total shade width. This "light gap" is necessary to accommodate the mounting brackets, clutch/motor, and idler end. Standard factory deductions will be applied automatically to ensure a perfect fit.

⚠ ATTENTION: Standard measurements include the mounting hardware. If you are ordering based on a **required fabric width** specify this clearly to ensure a proper fit and adequate coverage.

Important Production Details

Fabric "Wrap" Allowance

The factory automatically adds extra fabric (the "wrap") to your provided window length to ensure the roller tube remains covered when the shade is fully extended.

- **Motorized, Clutch & Spring Roller Shades:** 10" standard wrap
- **Critical:** Measure only the **actual window opening**. Do not add extra length for the wrap; the factory handles this calculation

Tracking & Telescoping (The 3:1 Rule)

Shades with a length-to-width ratio exceeding **3:1** (more than 3 times longer than they are wide) are prone to **telescoping** where the fabric tracks unevenly or "spirals" off the roll. This is an inherent trait of roller fabrics and should be disclosed to the end-user.

Railroading & Edge Curling

When a shade's width exceeds the fabric roll's width, the material must be "railroaded" (turned sideways).

- **Note:** Railroading may cause slight curling on the outer vertical edges
- **Solution:** If edge curling is a concern, select a wider fabric to avoid turning the material

Large Shades (Over 126")

Shades exceeding 126" in width may exhibit "smile lines," waves, or tube wrinkling. These are standard aesthetic characteristics of oversized roller shades and can occasionally lead to permanent fabric ripples.

Fabric Seams

If the shade dimensions exceed the fabric roll size, a second piece of fabric will be heat-welded (spliced) to the first.

Roll Direction: Regular vs. Reverse

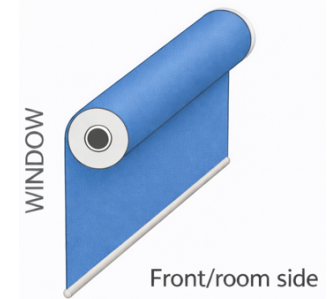

Regular Roll: Fabric hangs from the back of the tube closest to the glass. Best insulation and light control due to proximity to the window and yield the highest levels of energy conservation.

Reverse Roll: Fabric hangs from the front of the tube furthest from the glass. Ideal for avoiding obstructions clearing window cranks, door handles or deep trim. Reduces light gaps for corner windows or bay windows.

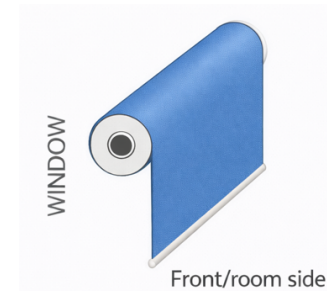

Telescoping & Tracking

Regular Roll

Reverse Roll

Chainhold Tension Device

The Chainhold Tension Device provides an essential, child-safe tensioning solution for chain-driven roller shades.

Safety Compliance:

To ensure full compliance with ANSI/WCMA A100.1 safety standards, this device is engineered to partially disable the shade if not installed correctly. This fail-safe mechanism ensures the tensioner is permanently secured minimizing strangulation risks.

Key Features

Rapid Integration: Designed for fast assembly and streamlined installation using available outside mounting brackets.

Minimalist Aesthetic: A sleek, compact profile that blends seamlessly into any interior décor.

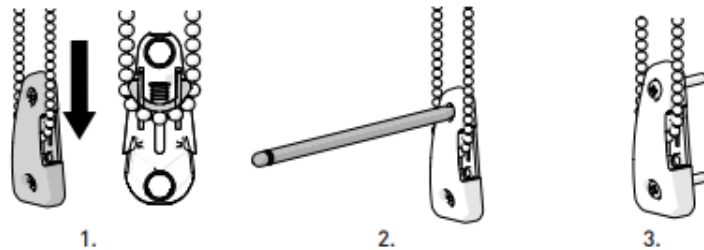

Smooth & Silent: Engineered for quiet, high-efficiency performance.

Universal Compatibility: Provides fluid operation with both metal and plastic stop balls.

Certified Safety: Fully compliant with current ANSI/WCMA child safety regulations.

INSTALLATION

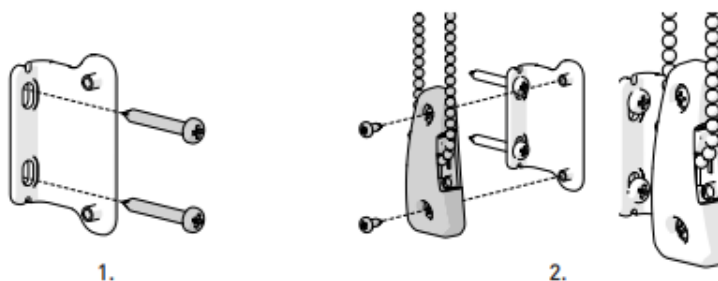

1. Pull the Chainhold down until the chain is fully tensioned (plunger will be fully raised).
2. Mark screw hole locations.
3. Screw device into wall.

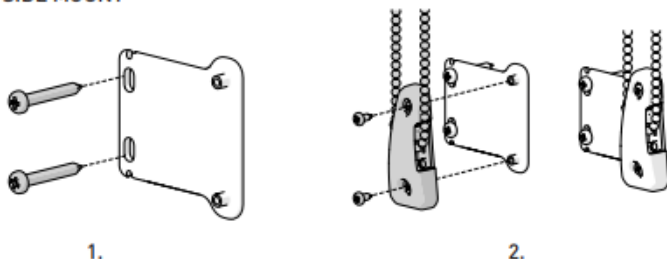

ADDITIONAL MOUNTING OPTIONS

1. With provided screws, install bracket first with large screws (use Chainhold marked screw hole locations as reference).
2. Install Chainhold into bracket with small screws.

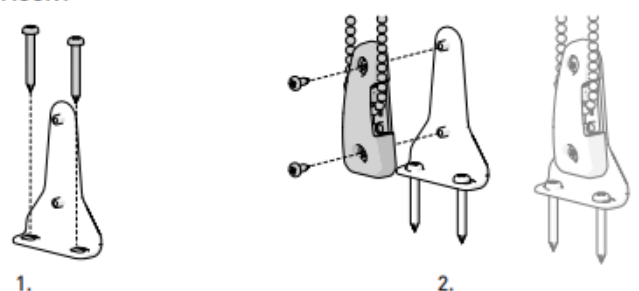

OUTSIDE MOUNT

SIDE MOUNT

FLOOR MOUNT

SKYLINE SERIES

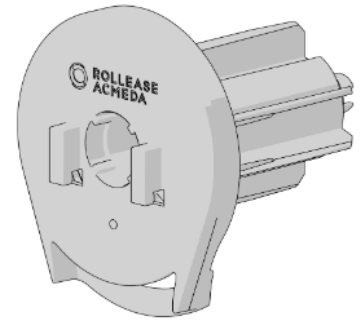

SLEEK, VERSATILE AND DEPENDABLE

The Skyline™ system features a patented improvement on the smooth and dependable operating clutch technology found in the R-Series, in a sleeker and rounded profile.

With a wider array of colors and sizes, matching rounded end caps, and universal single and dual brackets, Skyline clutches offer greater versatility and ease of installation.

Skyline clutches are ideal for both residential and commercial applications. Skyline clutches feature patented Velvetrol™ technology, have a lifetime warranty and can be used in any roller shade where overall aesthetics are important.

- **Spring-loaded pin-end** technology is highly forgiving for greater flexibility in installation
- **Patented Velvetrol™** internal spring arrangement provides a smoother feel when pulling a shade up or down
- **Sleek, rounded end cap** and no-notch fascia design for a more polished finish
- **Universal brackets** available in standard and dual with multiple projections also available in elongated or narrow bases
- **Hooked clutches** for easy and universal performance
- **Fiberglass-** filled nylon construction provides long lasting durability

COMPATABILITY Fascia, Cassette Systems, Contract Series, Spring Assist and Link Systems

GALAXY SERIES

PATENTED GEAR TECHNOLOGY LIFTS HEAVIER SHADES WITH MINIMAL EFFORT

The Galaxy line features patented technology that enhances clutch operation by using a process of planetary and rotating gears to assist the clutch's inner springs. This innovative technology reduces the pull required to raise heavier shades and enables lifting with minimal effort

- **Patented Velvetrol™** internal spring arrangement provides a smoother feel when pulling a shade up or down
- Option for Universal single or dual brackets for greater application
- Compatible with Skyline components
- Long-lasting Fiberglass-filled nylon construction
- Best used with bead chain
- COMPATIBILITY Fascia, Cassette Contract, Spring Assist, Link System

SPRING ASSIST

THE PERFECT COMPLEMENT TO CLUTCH TECHNOLOGY

Spring Assist combines the advanced, patented clutch technology with a spring that when pre-rotated to the designated tension, reduces the pull force required to raise heavy shades.

Spring Assist reduces the pull force on heavy shades to approximately 6 lbs (2.7 kg), even on shades weighing up to 30 lbs (13.5 kg).

- Easy-to-assemble system
- Sleeved spring provides smooth and quiet operation
- Compatible with Skyline
- No special brackets or end plugs required
- Lifetime warranty

DECORATIVE OPULENCE BRACKETS

Features

- Available in round and square options
- Elegant design removes the need for plastic bracket cover
- Quick and easy installation
- Compatible with manual, spring and motor shades
- Includes bearing for reduced noise during shade operation
- Magnetic screw cover hides screws for a seamless look
- Magnetic motor cover cleanly runs AC/DC wires through the bracket
- Skyline available in White, Black, Satin Nickel and Antique Bronze

72" - 77 7/8"	66" loop
78" - 89 7/8"	72" loop
90" - 101 7/8"	84" loop
102" - 113 7/8"	96" loop
114" - above	4" less shade height

CORDLESS EASY SPRING AIR

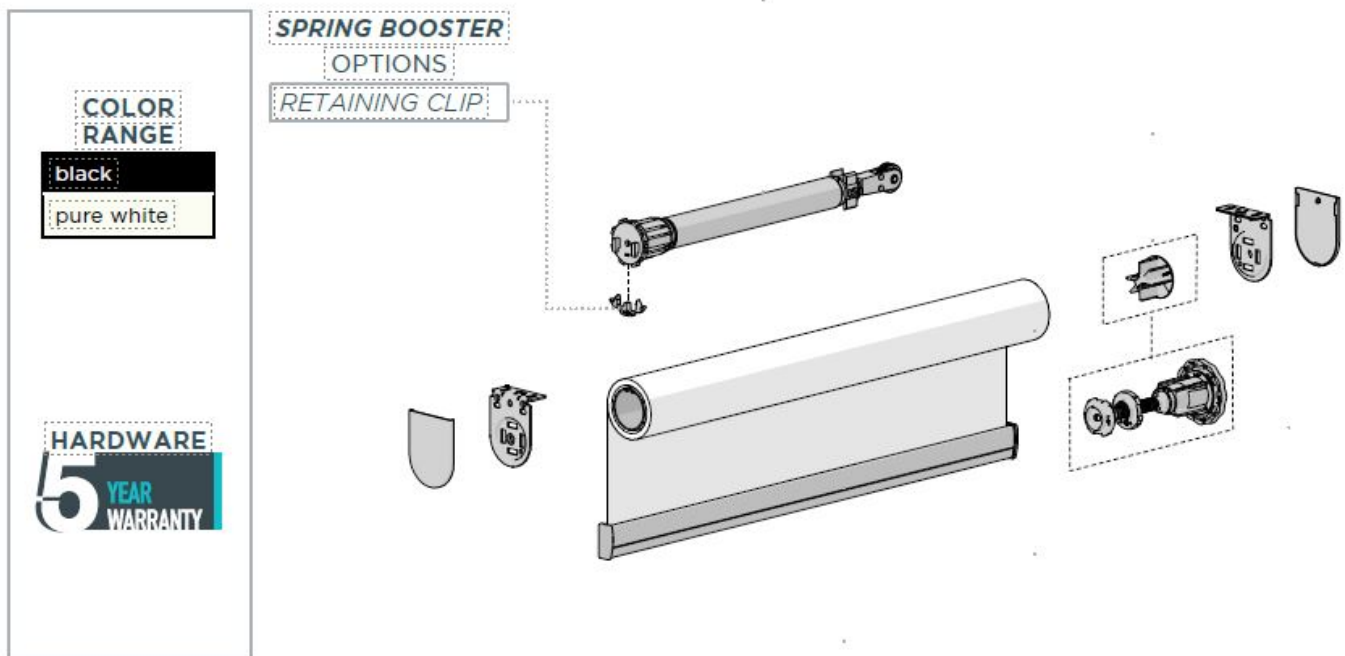

The Easy Spring Air cordless roller system is a simple yet robust balanced spring system that allows optimal shade positioning by simply placing the bottom rail in the desired location.

The single piece, adjustable spring system allows for countless spring sizes making it a breeze to balance any size shade. 16" Minimum Width up to 120" Maximum Width - Pending Shade Specification.

The smooth operation along with the ability for the end user to quickly and easily adjust tension with the shade in place makes this the most user friendly and versatile balanced shade on the market.

This system uses Skyline bracketing system, making it compatible with cassettes, fascias, and open roll brackets.

SPRING ROLLER SHADES

Spring roller shade features a heavy-duty spring-assist mechanism for smooth, reliable operation. To ensure structural integrity, we use precision-engineered metal tubes. These shades include universal mounting brackets and a simple cordless pull system at the hembar, allowing you to easily adjust light levels from full sun exposure to complete privacy.

Minimum Width: 15" Minimum Height: 18"
Maximum Width: 97" Maximum Height: 108"

ADJUSTING SPRING TENSION

The tension on the spring of your roller shade is already preset. If you wish or need to make any further adjustment, follow below noted procedures:

A. INCREASE LIFTING POWER

- 1) With the shade in the window, pull the shade part way down
- 2) Remove it from the mounting brackets and roll it half-way
- 3) Replace it in the brackets of the windows and try it for tension and length that it will go down without being over-taught (unable to roll down anymore). Do not force it if it does not want to move downward as it is now over-wound - instead now try decreasing the tension as follows:

B. DECREASE LIFTING POWER

- 1) With the shade in the window, roll the shade all the way up
- 2) Remove it from the mounting brackets and roll it half-way down
- 3) Replace it in the brackets of the windows and try it for proper lift & drop tension and travel distances top to bottom.

Note If the shade will not travel all the way to the top, then the spring tension needs to be increased -follow procedure **A**

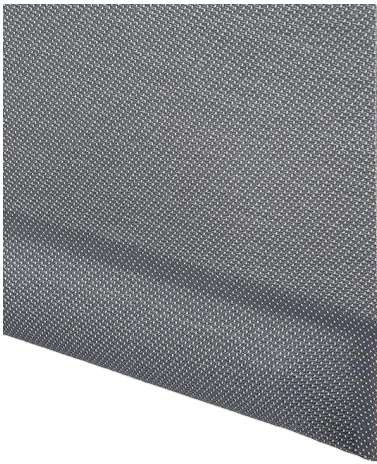

If the shade will not travel all the way to the window sill or beyond, then the spring tension needs to be decreased-follow procedure **B**.

HEM BAR OPTIONS

Heat Sealed Hem Bar The standard. A weighted aluminum weight bar is inserted into a 1 1/2" heat sealed pocket. Sealed Ends are the standard default. Open ends available.

Fabric Wrapped Hem Bar Available in Anodized, White and Black. Fully Wrapped, Half Wrapped or Fully Exposed. Handle included for cordless Shades, Optional Pull Hook available for hard to reach shades.

Grommated Hem Bar with Hold Downs for exterior shades which require further security

Heat Sealed Hem Bar

Fabric Wrapped Hem Bar

Grommated Hem Bar with Hold Downs

VALANCE OPTIONS

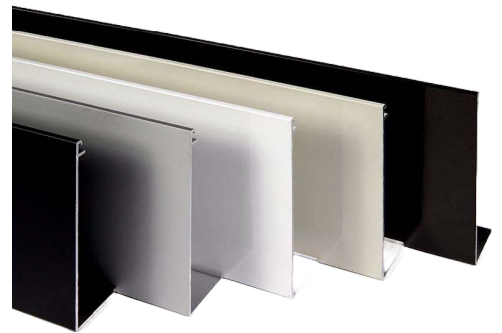

SOFT VALANCE

The soft valance is made out of the same fabric as the roller shade. The fabric valance has both a top and bottom pocket. The top pocket has a piece of wood inserted and the bottom pocket contains the same metal slat in the pocket as the roller shade hem. Screw through the top pocket and wood to mount the soft valance. The standard length is 6".

FASCIA SYSTEM - 3", 4" , 5.5" and 7"

Fascia systems are a decorative aluminum cover compatible with skyline roller shade hardware systems. The system is multi-functional in both mounting and finished appearance.

FEATURES

- Compatible with chain & motorized roller shade systems
- Large color range to suit any interior
- Suitable for residential and commercial applications
- Easy to install

CURVED CASSETTE 100 & 110 SYSTEMS

- Two different headrail sizes
- Sleek, gently curved cassettes that accommodate upscale commercial needs and afford greater residential appeal
- Quick and Easy Installation
- Linking available for two shades in one headrail
- Clutch, cordless & motorized options
- Improved end cap design for ultimate durability

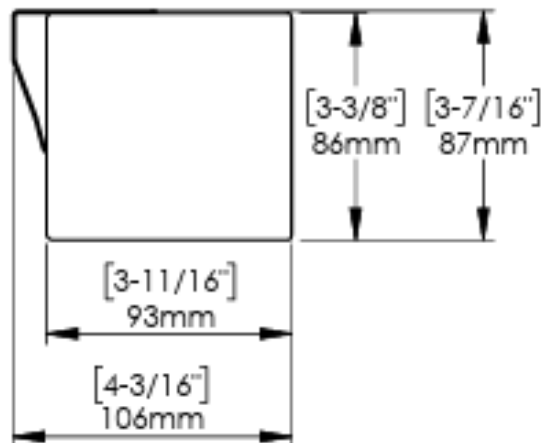

MAX ROLL

SQUARE CASSETTE 110 SYSTEM

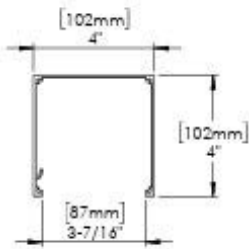

- Sleek, durable one-piece cassette that is just the right size
- Fabric wrap option
- Contemporary appearance
- Quick and easy installation
- Fabric brush feature to help reduce light gap
- Clutch, cordless & motorized options
- Reverse roll compatible

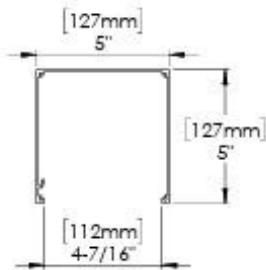

POCKET-CONTRACT

- Recessed shading systems allow shades to seamlessly disappear into any ceiling when not in use
- Removable bottom closures available for single and dual shade systems
- Aluminum composition retains structural integrity while allowing for on-site cutting
- Extrusions are 10' lengths to allow for easier transportation and navigation on job sites
- End plates are rotational and symmetrical for ease of installation
- Available in White & Anodized (4" and 5" only)

SILLCHANNELSL

Roller Shade Material

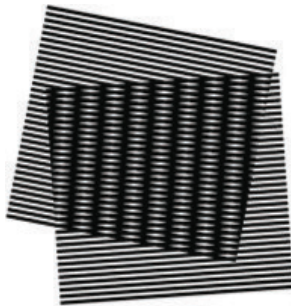

Pristine Roller Shades are available in many colors, textures and privacy options from the top manufacturers in the world.

Pristine Roller Shade Material tend to fall into three categories: Solar Screens, Decorative Transluents & Blackouts. Within these three categories the fabrics range from functional to decorative and everything in between.

Solar Screens

- These are Mesh fabrics designed to control natural light
- Available in many "openness factors" i.e. 1%, 3%, 5%, 10%, etc. Openness Factor affects comfort, the degree of visibility and glare control
- Protects interiors and furnishings from the damaging rays of the sun
- Reduces glare for televisions and computer screens
- Preserves the view to the outside. Note that this view is from the relative dark side to the relative bright side so at night a lit room will be visible from the outside
- Provides a decorative aspect – especially with the latest in Solar Screen designs

Caution!! Some Solar Screen fabrics installed on windows with existing insect screens can cause a "Moiré Effect" which could be objectionable to the end user. It is always best to test for this with a fabric sample BEFORE ordering the shades.

Transluents

- These fabrics let in some light but none of the view affording a nice warm glow in the daytime and privacy anytime
- Pristine has Translucent fabrics that have a matching Blackout counterpart

Blackouts

- As the name implies these fabrics will not allow any direct light to pass through. There is no openness in the fabric, however some portions of the fabric composition are translucent enough that you may see a "glow" behind the shade, particularly if the window is facing east or west. No UV rays penetrate the fabric and there is complete privacy. The "glow" varies by fabric
- Pristine has Blackout fabrics that have a matching Translucent counterpart

Caution: While a Blackout shade does not allow any light to pass through the fabric, light can and will bleed around the sides, top & bottom of the shade. Pristine offers valances, side rails and sill channel to eliminate all light from the window.

MOTORIZED EXTERIOR SCREENS

- Enhance your indoor and outdoor living experience
- Insect screen, solar screen & privacy screen options
- Increase comfort-block heat and harmful UV rays
- Control insects-breezes blow through while bugs & insects stay out
- Improve privacy-relax in comfort without the worry of who's watching

WARRANTY

Porter Preston proudly extends a lifetime-limited warranty on the enclosed product to the original retail purchaser as long as the product remains in the original window.

WARRANTY COVERAGE

Entire product against manufacturing defects (i.e., a flaw in the product design, materials or workmanship that causes the product to no longer function).....Lifetime
 Fabrics.....5 Years
 Somfy/Rollease products.....5 Years

NOT COVERED

Normal wear and tear

Any product that fails due to:

- abuse
- exposure to salt air
- improper installation
- accident
- extraordinary use
- improper operation
- alterations
- improper cleaning
- misapplication
- damage from pets/insects
- improper handling
- misuse

Any product that, with the passage of time, has:

- loss of color intensity

Costs Associated with:

- product removal
- transportation
- brand label removal
- product remeasure
- incidental or consequential damages
- product reinstallation
- shipping

In the event there are multiple shades in the same room, only the defective shade will be replaced. If damage occurred during shipping, call 203-753-1113 and report within 14 calendar days or else you may be denied credit for your damaged product. Any unauthorized returns will not be accepted.

THIS SHALL BE YOUR SOLE REMEDY UNDER THIS LIMITED WARRANTY.

If this product is found to have a manufacturing defect in materials or workmanship, we will

(at our discretion) do one of the following:

- repair the product
- replace the product
- refund the cost of the product
- Colors vary from lot to lot and may not exactly match sample swatch or previous purchases
- Discontinued items or color selections will be replaced with the closest equivalent current product

This lifetime limited warranty gives you specific legal rights and you may have other rights, which vary from state to state. Some states do not allow limitations on how long a warranty lasts so the above limitations may not apply to you. No agent, representative, dealer or unauthorized employee has the authority to increase or alter the obligation of this warranty. This lifetime limited warranty supersedes any previous versions.
